-!- FUNCTION: ENHANDES THE TRANSLATION OF DOWNSTREAM ORF'S ON POLYCISTRONIC MENA'S DERIVED FROM CAULIFLOWER MOSALC VIRUS.
-!- SUBCELLULAR LOCATION: Cytoplasmic inclusion bodies.
-!- MISCELLAMEOUS: THE INCLUSION BODIES ARE THE SITE OF VIRAL DNA SYNTHESIS, VIRIOM ASSEMBLY AND ACCUMULATION IN THE INFECTED CELL.
-!- SIMILARITY: Belongs to the caulimoviruses viroplasmin family.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Gaps

Submitted (MAR-2000) to the EMBL/GenBank/DDBJ databases.
-!- FUNCTION: Transcriptional activator. Able to bind to two different type of DNA binding sites. Isoform FOXJ2.L behaves as a more potent transactivator than FOXJ2.S.
-!- SUBCELLULAR LOCATION: Nuclear.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Perez-Sanchez C., Gomez-Ferreria M.A., de la Fuente C.A., Granadino B., Velasco G., Esteban A., Rey-Campos J.;

3-isopropylmalate dehydrogenase (EC 1.1.1.85) - Sphingomonas aromaticivorans plasmid phaseoies: Sphingomonas aromaticivorans
C,Species: Sphingomonas aromaticivorans
C,Bate: 11-Jan-2000 #sequence_revision 11-Jan-2000 #text_change 18-Feb-2000
C,Accession: T31128
R;Romine, M.F.; Stillwell, L.C.; Wong, K.K.; Thurston, S.J.; Sisk, B.C.; Sensen, C.W.;
submitted to the EMBL Data Library, July 1998
A,Description: Complete sequence of a 184 kb catabolic plasmid from Sphingomonas aromat
A,Reference number: Z20992
A,Accession: T31128
A,Accession: T31128
A,Scatus: preliminary; translated from GB/EMBL/DDBJ
